

B-Tech International is a global leader in the design and manufacture of mounting solutions for audio and video equipment. Founded in London, England (est.1972), B-Tech has grown from a generic audio video distributor operating in South East London to an original design manufacturer with office locations and distribution centres spanning the world, including strategic locations such as Buffalo NY, Toronto, London, Singapore, Hong Kong, Belgium, Moscow and Sydney plus over 50 international distribution partners.

The B-Tech product range includes mounting solutions for flat panel displays such as LCD and plasma screens, projectors, loudspeakers as well as the traditional CRT tube televisions. B-Tech's range of audio video mounts can be classified into two categories: retail and professional. For the retail market B-Tech has a full range of products available in attractive full colour packaging, all designed to be easily installed by the end consumer. For the professional market, B-Tech has a comprehensive range of products including a flexible modular range known as the System 2™. These are based on a 2" diameter pipe system and allows the installer to wall and ceiling mount audio video equipment in an almost infinite number of ways.

B-Tech's professional range has been used in numerous locations worldwide such as sports stadia, airports, hotels, schools, offices and custom home installations. In addition to these, B-Tech also has a range of professional interconnect cables and the BiB range of audio video care and cleaning accessories.

All products are designed in the UK and USA by a skilled team of engineers to meet market demands. The range of audio video mounts use heavy gauge steel and are designed to make installation simple and quick. Strict safety standards as laid out by bodies such as UL/CSA and GS/TUV are adhered to, and B-Tech are members of several international industry bodies such as CEDIA and InfoComm International - all of which ensure the customer can be confident that they will have the best possible solution to meet their A/V needs.
